E-On Integration proposes :

SOLUTIONS THAT MAKE A DIFFERENCE

e Invoicing functionality in E-ON RIX

Our globally awarded application suite E-ON RIX has functionality for electronic Invoicing which dramatically reduces your costs for traditional paper based manual billings. Costs spent on consumables (paper, ink, etc) and on working hours for archiving and storage.

At the same time the image of your business will greatly improve in the eyes of your customers.

The e Invoicing functionality gives a new perspective to your collaboration with your customers since it enables them to access your application to automatically retrieve invoices that concern them without any further action from you. (Pull Mode).

Of course they can receive the electronic files and the structured format files to also update their own applications. This without any further action from you as well!

- The billing documents are generated by the application in a digital format and the files are automatically archived. This means no need for physical invoices .

- The digital files / invoices will be sent to an e-mail account in PDF, "a.txt" and "b.txt" form. The e-mail account used will be one designated exclusively to the application and not personal or company e mail accounts of your people.

- Ability to select automatic dispatch of e mails to customers without any intervention of the users / issuers of the invoices.

- The system provides a "confirmation of receipt" feature for the emails sent to customers. It your customers use this feature then the invoices issued are not only marked as "sent" but also as "confirmed".

- This functionality is available not only for authorized users that you have given access to E-ON RIX (RIX visitors) **but also to unregistered users**, as is most probably the case of the majority of your customers.

- If the recipients detect any issues with the invoice (i.e. errors in amounts, in quantities etc.) **they can notify you automatically** following a simple procedure even more simple than an email!

- This notification may come to you as a simple text or even create a "pending item" in the embedded CRM module of your E-ON RIX application suite. This way the customer record, the invoice and the reported issue can all be found in one single place.

- Export of the Invoice or Dispatch Document data in a structured format that can be recognized by other software applications so the receiving parties may avoid any manual registration on their systems. Furthermore we can implement your own formats, if you already use similar systems.

- In case of tax audit all data are available on line, as required by the applicable tax legislation.
