**e on RIX**  
**Publications & Press**

**An integrated Business, Financial and CRM suite on the cloud for the media company. The publisher of books, magazines or newspapers. With a monthly subscription fee per user.**

## Production Process Management

Presentation of all the critical financial data of the production of any kind of publication in a common manner.

- Cost Estimates and Budgeting.
- Estimates of Revenues.
- Terms and collection schedules.
- Detailed cost transactions.
- Details on production progress.

A range of tools and techniques to control operations in the area of production in such a way that enable early detection of deviations from planning and allow for the required corrective measures in order to achieve the objectives.

## Budgeting

The system provides for cost estimates in various desired levels. For example for the entire production or for individual tasks. The cost estimates may be calculated independently or they may be connected to Accounting from which they pull primary cost elements.

Cost estimates may be budgeting or actual. They may be presented in a Gantt Chart, as completed percentage of the production budget with its detailed cost components and relate to the initial or revised estimates.

## Connected Documents

The system allows to enter third parties' transaction documents (Purchase Invoices, expense sheets, etc.). These may participate in the cost estimates and the progress reports of each project.

The above documents may automatically update stocks and inventories and help form purchase orders.

## Assigned Tasks

Workflow functionality to support assignments of tasks to specific people or departments or all kinds of units.

Time report or time sheet functionality, so that each time it is evident who worked on which project, how much was the added cost to it and of course what revenue was generated by each one's involvement. Each person or unit can participate in one or more tasks.

## Postings

Orders for postings and notices are recorded in full detail and illustrate the required tasks. The billing amounts are automatically calculated based on various embedded tables. Invoices are issued with the press of a button.

E-ON RIX offers functionality and workflows that enable the company officers to act smarter and carry out their tasks on time. They also have a clear view of the statuses concerning billings and collections.

## Subscriptions

Fully automated subscription process that produces maturity reports and all other managerial and informative reporting. On the expiration dates the system issues invoices with the push of a button and produces labels for posting. Upon payment of subscriptions accounting is updated automatically.

## Inventories

Management of stock (with respective ISBN codes for books), storage physical identification, sales pricelists, special offers.

View of reserved quantities for each book or printed item.  
Detailed transactions.  
Sales and orders analytical data for each book or printed item.

Overall demand for each printed item per year.

Search within the company's central warehouse or other warehouses in its network.

View of details such as selling prices, stocks, quantities, reserved, quantities on order.

Adjustments on pricing lists, creation of promotional activities, discounts.

Warehouse tax book detailed or summary for one or for more warehouses, or for many storage areas (own stock, or stock in third parties' warehouses, or other parties' stock).

## Reports

One of the strong advantages of the system is the generation of Reports.

Officers have at their disposal a sufficient mechanism to generate various reports according to their needs. So they can produce reports by date, by task, by person etc. These reports help them have accurate information at all times.

## Book Stores

Links the company's book stores with the Warehouse and supports generation of fiscal documents. Automatic updates of inventories.

- Connects partners' book stores on line with the central company warehouse for real time updates of inventories.
- Supports on-line orders from book stores.
- Partner book stores can view on-line their financial transactions with the company (customer record).
- Automatic updates of transactions between partner book stores and the company.
